SEWER WORK NOTICE Smoke Testing

The test will be performed within 45 days after you receive this notice

The Montville WPCA has initiated a long term plan of sewer system repairs and system upgrades to reduce the amount of rainwater or other clean water that enters the sanitary sewer system. During periods of rainfall and/or high groundwater the Town's Collection System and Waste Water Treatment Facility (WWTF) experiences high flows. It is therefore necessary to locate and repair such sources so that our infrastructure can contain, convey and sufficiently treat the sewage. We are notifying you that testing is required in the vicinity of your home.

URS Corporation has been engaged by the Montville WPCA to conduct a study to locate sources of storm water inflow to the sanitary sewer system. The goal is to repair or remove the sources of inflow, so the sewer system does not overflow during periods of heavy rain. Smoke Testing is one of the methods used to locate inflows.

During the test, white smoke is blown into the sanitary sewer system. The smoke will vent from holes in manhole covers and plumbing vent pipes located on or near roof tops. Smoke should not enter your premises unless there is a dry trap in your basement floor drain or if you have any unused plumbing fixture(s). You may want to pour some water down your basement drain or unused plumbing fixture(s) to insure that the drain trap will be effective. Smoke could also enter through defective plumbing which should be repaired if smoke is detected.

If you detect smoke in your premises, **DO NOT BE ALARMED**. The smoke is **ODORLESS, NON-TOXIC AND NON-STAINING** and will dissipate quickly. It is not harmful to pets or plants and leaves no residue. Open a door or window for ventilation and report the presence of smoke in your premises to the personnel conducting the test or at the numbers listed below. If possible, they will help you locate the source that allowed the smoke to enter the building. Local Fire Personnel will be working with field staff and will be able to differentiate between smoke from the testing and smoke which could result from a fire unrelated to the testing.

IMPORTANT: If someone has a lung ailment or respiratory condition, being in contact with concentrated amounts of the smoke may aggravate the condition. If you have these or any other concerns please contact, Roslyn DesJardins at the number listed below.

For more information or for a complete list of streets being tested, contact the Montville WPCA, or visit the Town website at WWW.TOWNOFMONTVILLE-CT.ORG. The Material Safety Data Sheet for the smoke candles is available for review on the web site or at this office.

Thank you for your cooperation in this effort to provide you with quality sanitary sewer service.

Questions should be directed to Roslyn DesJardins of URS (800) 247-8811 or Brian Lynch of the WPCA (860) 848-3030 ext 311 between the hours of 8:00 a.m. and 4:00 p.m.
